

Unimouse

Perfect fit for hands of all sizes and shapes

Unimouse is the most adjustable one-hand computer mouse on the market. This vertical mouse is designed since every hand is different and there is no one mouse that fits all hands. The patented articulated hinge makes it possible to adjust the angle of the mouse anywhere from 35 to 70 degrees. The friction-based locking system is stable in every position and the moveable thumb support is adjustable in all directions. This alleviates gripping pain and pressure on the base of the thumb, reducing repetitive strain injuries and allowing you to maintain a relaxed grip on the mouse. Built with recycled plastic and certified packaging.

Right or left hand - wireless or wired

With six programmable buttons and a comfortable scrolling wheel, you can assign just about any task to any of the buttons to meet your specific needs. Whether you are right- or left-handed, require a wireless or wired computer mouse, there is a Unimouse to suit you. Variation is key with Unimouse.
